

In the Claims

Please substitute the following clean copy claims for the claims of the same number.

A3
SUB B1

1. (Once Amended) A method for receiving digital information and transmitting the information in a localized area, comprising the steps of:

receiving an audio communication as digital information from a remote source via the Internet;

converting the digital information to analog information;

broadcasting the analog information at low power in a localized area in at least one preselected radio frequency; and

receiving the broadcast information in the localized are on a radio frequency receiver tuned to at least one frequency to permit listening to audio communication.

Sub E17

2. (Once Amended) The method of claim 1, wherein the step of receiving digital information comprises receiving information through a means selected from the group consisting of digital subscriber line transmission, telephone line transmission, cable transmission, and satellite transmission.

3. (Once Amended) The method of claim 1, wherein the step of broadcasting comprises broadcasting in a radio frequency modulated waveband in the range of about 88 MHZ to about 108 MHZ and an amplitude modulated waveband in the range of from about 540 Khz to about 1.6 MHZ.

A3
cont.
4. (Once Amended) The method of claim 1, wherein the step of broadcasting the analog information comprises broadcasting at a power level less than about 100 milliwatts.

SUB
DI
5. (Once Amended) The method of claim 1, wherein the step of broadcasting the analog information is initiated at a predetermined time and in a predetermined frequency.

6. (Once Amended) The method of claim 1, wherein the step of broadcasting comprises broadcasting information in multiple frequencies.

E
7. (Once Amended) The method of claim 1, wherein the step of broadcasting comprises broadcasting information in a first frequency for a first time period, and broadcasting information in a second frequency for a second time period.

Cancel claim 8.

A4 9. (Once Amended) The method of claim 1, wherein the step of receiving digital information comprises receiving music as digital information.

10. (Once Amended) The method of claim 1, wherein the step of receiving digital information comprises receiving radio program content as digital information.

A5 17. (Once Amended) A method for receiving digital information and transmitting the information in a localized area, comprising the steps of:

843
33 receiving digital information from a remote source via the Internet;

converting digital information to analog information; and

broadcasting the analog information in a localized area in at least one preselected frequency modulated radio frequency.

18. (Once Amended) A method of claim 17, further comprising the step of storing received digital information before converting the digital information to analog information.

Sub E17 19. (Once Amended) A method of claim 18, further comprising the steps of converting the stored digital information to analog information at a predetermined time; and broadcasting the analog information in a localized area.

Cancel claim 20.

Please add the following dependent claim.

21. (Newly Added) The method of claim 17, wherein the step of broadcasting the analog information is in at least one preselected amplitude modulated radio frequency.
